

When Do I Need A Computer Forensics Expert?

In today's electronic age, it is important to be familiar with technology and how it can benefit your business. However, there are instances when technology can cause damage to a business or employer. When situations like these arise, you need to have a professional who can quickly identify the problem and provide a solution.

The Crosslin Computer Forensics team can discreetly access and image computers, networks and other storage media, as well as perform in-depth analyses in our secure forensics lab. Among the many services we provide are:

- Collecting and preserving electronically stored information
- Analyzing an individual's conduct, including deletion activity, file copying, Internet browsing and wiping/secure deletion activity
- Searching live and deleted files, unallocated space and slack space, based on keywords and/or concepts
- E-Discovery consulting to include identifying known system and user files, as well as duplicate files, to limit and expedite document review
- Perform a security and forensic audit to mitigate risk during future issues

Specific instances of when our team of experts has been called on include:

- Analysis of employee misconduct and possible data theft at a financial institution
- Data recovery and response to critical hardware crash
- Contract disputes
- Analysis due to an information leak, internet and blogging activities of an executive level employee
- Reconstruction of MySpace traffic to prove employee misconduct
- Search large e-mail systems for key words or documents
- Policy development to help ease e-discovery and retention issues

Please contact the Crosslin Forensic Team to assist you with your computer forensics needs.
